Outdoor Kitchen Review

This project was stressful, and very difficult to accomplish. With all these assignments and a limited amount of time, it was very demanding for us. At first, my teammates didn't want to do anything. I felt like I was the only one doing work for a very long time. There is also this 1 person that literally didn't do anything for the majority of the time. Luckily, we had managed to get stuff done, and we also finished our design presentation and binders. My strengths in this project was learning how to carry my team. That's what being a good leader is. If you aren't a good leader, then you tend to fall behind, and follow others. I remember doing a majority of the work, while my other teammates did a little. If I could revise anything about this project, it would probably be to fix the final model. Hot glue is a mess, and it made our model look a little sloppy. I also wish I could revise the blueprint because that looks a little messy too. I faced a lot of challenges. My group would constantly get into fights, we would be lazy and not get things done, and sometimes we wouldn't get homework and classwork done. I already was a leader from the beginning, I just wish my teammates stepped up the pace a little faster.
